

How to care for your roses

With a little love and care you can keep your blooms looking beautiful!

We suggest following our simple care tips to get the best out of your Grandiflora Roses:

1

Carefully remove the packaging sleeve as soon as possible, cut the base of the stems & place them into a clean vase with fresh water.

Do not overcrowd the container, allowing individual blooms to have space to open nicely.

Use a tall container to hold and support the rose stems.

3

Avoid water or moisture wetting the petals and blooms. Do not spray or mist water on the rose heads as this may cause damage.

To extend vase life we suggest replacing with fresh water every few days.

2

If the roses are not being kept in a cool room keep the roses in natural light and away from direct sunlight.

Avoid placing roses near heating and cooling units. Trying to force the blooms to open quicker can cause damage.
